Voice Calling Agent • Client Guide & Technical Manual

Version: 1.0.0

Date: September 2026

Confidential

1. Executive Summary

Athanni Softech's Voice Calling Agent is a high-performance conversational AI voice system engineered on Vapi's real-time WebRTC architecture. By integrating ultra-accurate speech recognition (Deepgram Nova-2), state-of-the-art language models, and hyper-realistic voice synthesis (ElevenLabs), this agent delivers human-grade telephone and web conversations with under 700ms latency.

This solution empowers businesses to automate 24/7 customer support, inbound lead qualification, appointment booking, and routine phone interactions with zero hold times.

2. Complete Feature Matrix

2.1. Core Conversational AI & Speech Engine

- Sub-Second Latency (<700ms)

Eliminates awkward pauses through optimized WebRTC streaming pipelines.

- Neural Voice Synthesis (ElevenLabs)

Delivers natural human inflection, emotional nuance, and dynamic pacing.

- Real-Time Speech Recognition (Deepgram)

High-accuracy multi-accent transcription that handles background chatter.

- Natural Barge-In & Interruption

Callers can speak over the AI mid-sentence; the agent pauses instantly to listen.

- Smart Voice Activity Detection (VAD)

Detects genuine pauses and thinking intervals to prevent cutting the caller off.

- Background Noise Suppression

Filters ambient noises, car sounds, and echo for crystal-clear acoustics.

2.2. Web Portal & Interactive UI Features

- 3D Audio-Reactive Voice Orb

Dynamic visual sphere transitioning across Idle, Connecting, Listening, Thinking, and Speaking.

- Live Waveform Audio Meter

Dynamic frequency bars visually reacting to caller and agent voice decibels.

- Dual-Channel Live Transcript

Streams user and assistant dialogue in real time with timestamps and avatars.

- 1-Click Clipboard Transcript Copy

Enables instant export of conversation text for CRM logs, support tickets, or audit notes.

- In-Call Audio Controls

Instant microphone mute/unmute, call duration timer, and clean session disconnect.

- 1-Click Embed Snippet Generator

Built-in generator for HTML/Webflow, React/Next.js, and Iframe embed codes.

2.3. Telephony, Integration & Automation Features

Capability	Description	Benefit / Integration
Dedicated Phone Numbers	Assigns direct inbound and outbound phone numbers (US, UK, International).	Connects directly via Twilio, Vonage, or Vapi native telephony.
Smart Call Forwarding	Forwards calls from existing office phone lines after-hours or on busy line.	Zero friction for clients; no need to change existing business numbers.
Automated Webhooks	Instantly emits JSON payloads at call conclusion with recording and summary.	Routes data into Make.com, Zapier, n8n, or custom API endpoints.
Structured Data Extraction	Parses caller name, email, contact info, booking times, and qualification status.	Syncs directly to GoHighLevel, HubSpot, Salesforce, or Google Sheets.
Full Audio Recordings	Generates high-fidelity cloud audio recording links for every completed call.	QA monitoring, compliance, and dispute resolution.

3. End-User Calling Guide

1. **Open Deployed URL:** Navigate to your production link (e.g. `https://athanni-voice-agent.vercel.app`) on desktop or mobile.
2. **Allow Microphone Access:** Click **"Start Voice Call"**. When prompted by your browser, select **"Allow"**.
3. **Conversational Dynamics:** Speak naturally. The central visualizer will show:
 - Listening (Green ripple) — Agent is listening.
 - Thinking (Violet pulse) — Agent is reasoning.
 - Speaking (Purple waves) — Agent is speaking.
4. **Review Transcript:** Review the live dialogue on the right side and click **"Copy"** to save the text.
5. **End Call:** Click **"End Call"** to gracefully close the session.

4. Client Website Embedding Snippets

To add the voice agent directly to the client's existing website (Webflow, WordPress, Shopify, Wix, Squarespace, or HTML):

```
<!-- Place before closing </body> tag -->
<script
  src="https://cdn.jsdelivr.net/gh/VapiAI/html-script-tag@latest/dist/assets/index.js"
  defer
></script>

<vapi-button
  public-key="90fb2000-8816-4057-9c1a-2c94bd7dfa67"
  assistant-id="4979a054-806c-45d1-bf84-e83f8a58d61e"
></vapi-button>
```
